

## **Airport Expansion Project - 2002/2003**

The Cleveland Hopkins International Airport is located next door to GRC. The airport expanded its runway with a parallel runway of 9,000 feet, using a portion of GRC property. Since this became a joint project between the airport and NASA, the Waste Management Team has supervised disposal during this two-year project.

The Team has tracked all waste as part of the RCRA manifest process, has inspected all lots, and made sure all metal, soil, debris, etc., went to the proper facilities.

1,300,000 pounds of metal was sorted and recycled!
